Procedures

<input type="checkbox"/> Routine Prophylaxis (Stage I Periodontal Disease):	<input checked="" type="checkbox"/> Pre-Anesthetic Exam <input checked="" type="checkbox"/> Pre-Anesthetic Blood Profile* <input checked="" type="checkbox"/> Pre-Anesthetic Pain and Antibiotic Injections <input checked="" type="checkbox"/> Ultrasonic Scaling <input checked="" type="checkbox"/> Dental Polish <input checked="" type="checkbox"/> Individual exam of each tooth <input checked="" type="checkbox"/> Sub gingival scaling
<input type="checkbox"/> I authorize dental radiographs	<input checked="" type="checkbox"/> Each pet varies to the degree of periodontal disease, 75% of pets have underlying disease that can only be identified by dental radiographs.
<input type="checkbox"/> I authorize extractions as needed	<input checked="" type="checkbox"/> After radiographs (x-rays) are taken, appropriate treatment or extractions will be determined.

***Pre-anesthetic blood/health screening**

We provide a pre-anesthesia blood profile to maximize patient safety and alert the doctor to the presence of dehydration, anemia, diabetes and/or kidney or liver disease which could complicate the procedure. These conditions may not be detected without a pre-anesthetic profile. These tests are similar to those your own physician would run if you were to undergo anesthesia. I understand that complications could occur while under anesthesia. The doctors will minimize these risks by giving anesthetic drugs tailored to your pet's health status and by monitoring them closely while they are under anesthesia.

A small area of hair may be shaved on your pets' leg to assist in IV Catheter placement

- I DO NOT** wish to have an estimate for today's services
- I would like an estimate of today's services
- My pet has had no food after 9:00 pm last night and has had no water this morning
